

User Manual To Run Website

1. Download and Install XAMPP

1. Download XAMPP:

- Go to the official XAMPP website.
- Download the XAMPP installer for Windows.

2. Install XAMPP:

- Run the downloaded installer.
- Follow the installation prompts, selecting components (e.g., Apache, MySQL) as needed.
- Choose an installation directory (default is usually C:\xampp).
- Complete the installation process.

2. Start XAMPP

1. Open XAMPP Control Panel:

- Navigate to the XAMPP installation directory (C:\xampp by default).
- Run xampp-control.exe to open the XAMPP Control Panel.

2. Start Apache and MySQL:

- In the XAMPP Control Panel, click the "Start" button next to Apache to start the web server.
- Click the "Start" button next to MySQL to start the database server.

3. Verify Installation

1. Check Apache:

- Open a web browser.
- Navigate to `http://localhost`.
- You should see the XAMPP dashboard, indicating that Apache is running.

2. Check MySQL:

- Open a web browser.
- Navigate to `http://localhost/phpmyadmin`.
- This opens phpMyAdmin, indicating that MySQL is running.

4. Configure and Use XAMPP

1. Place Your PHP Files:

- Store your PHP files in the htdocs directory located within the XAMPP installation directory (C:\xampp\htdocs by default).

2. Run PHP Scripts:

- Open a web browser.
- Navigate to `http://localhost/Crisis/index.php`

- Your PHP script will be executed and the output will be displayed in the browser.
3. **Create a Database:**
- Open phpMyAdmin by navigating to <http://localhost/phpmyadmin>.
 - Click on the "Databases" tab.
 - Enter a name for your new database and click "Create".
